# White Label and Professional Services

Your Portal, Your Way

FileAnywhere has made it simple to meet your needs with branding and features tailored for your business.

Our white label services allow you to brand your private cloud, creating a seamless experience for your employees. Business and enterprise accounts receive a dedicated team of specialists to help design the right plan and meet objectives.

But it doesn't end there. We don't just sell you a product, we develop a relationship and partner with you. We'll take you through migration, assist with branding, and create a seamless look throughout your portal. After deployment, we provide VIP support and custom development to ensure the FilesAnywhere application meets your needs.

Branding

A cloud-enabled extranet with private web portals featuring your company's look and feel means a unified experience for your team. Custom branding opportunities include the home page, site graphics, help files, and all internal pages. If your company requires personalized messaging for employees and guests, customized email content is also available.

VIP Support

VIP technical support gives you a dedicated number and support engineer. You'll never receive an automated recording. Rather, you'll immediately talk to a human being, and your questions will be handled quickly, professionally, and courteously.

Custom Development

FilesAnywhere for business and enterprise boasts an extremely strong feature set in both the Administration Console and data management tools. It's also a dynamic application backed by a team of expert developers at the ready. If you find that you need a custom functionality, we're here to provide it to you.

A turnkey solution and business agility that accelerates innovation. That's the beauty of the private cloud.
